

## Vacuum Blister-Shell Packaging Machine BP-580 (Continuous)

Product Image:

QR Code:

### Features :

1. This packaging machine is used in heating the transparent blister-shell which is made by vacuum forming machine, and blister-shell will be attached with exquisite-print cardboard.
2. There are two kinds way of Heating: Instantaneous heating and direct heating.
3. The continuous operation such as feeding, sealing, unloading, and position of sealing, which is all controlled by sensor.
4. The conveyor which is designed with two sections control. It's easy to change the templates, and also can be set restart time after stop.
5. Continuously automatic unloading allows great packing capacity.
6. The electronic brake motor is powerful in starting and accurate in stop positioning.
7. The automatically cyclic operation of conveyer belt brings amazing mechanical work efficiency, reaches high production.

### Use :

1. Suitable for all products which are packed with blister-shell, such as hardware, electronic products, stationery, foods, ornaments, toys and necessities, etc.

### Specifications: (Unit: m/m)

Model	Mode	Power	Qty. of Template	Template Area	Capacity	Need use with Air Compressor	Height of Worktable	Machine Size
BP-580	Instantaneous heating	220V. 1Ø	12	380 x 600	2-4 SEC	1/2 HP	900	3000 x 950 x1450
BP-580H	Direct heating.	220V. 1Ø	12	380 x 600	2-4 SEC	1/2 HP	900	3000 x 950 x1450
